The Robin MiniMe was not designed for merged projection as due to the nature of the light source, each projector can look slightly different.

FOR YOUR OWN SAFETY, PLEASE READ THIS USER MANUAL CAREFULLY BEFORE POWERING OR INSTALLING YOUR ROBIN MiniMe!

Save it for future reference.

This device has left our premises in absolutely perfect condition. In order to maintain this condition and to ensure a safe operation, it is absolutely necessary for the user to follow the safety instructions and warning notes written in this manual.

The manufacturer will not accept liability for any resulting damages caused by the non-observance of this manual or any unauthorized modification to the device.

Please consider that damages caused by manual modifications to the device are not subject to warranty.

The Robin MiniMe was designed for indoor use and it is intended for professional application only. It is not for household use.

1. Safety instructions

DANGEROUS VOLTAGE CONSTITUTING A RISK OF ELECTRIC SHOCK IS PRESENT WITHIN THIS UNIT!

Make sure that the available voltage is not higher than stated on the rear panel of the fixture.

This fixture should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supplied, consult your authorized distributor or local power company.

Always disconnect the fixture from AC power before cleaning, removing or installing the fuses, or any part.

The power plug has to be accessible after installing the fixture. Do not overload wall outlets and extension cords as this canresult in fire or electric shock.

Do not allow anything to rest on the power cord. Do not locate this fixture where the cord may be damaged by persons walking on it.

Make sure that the power cord is never crimped or damaged by sharp edges. Check the fixture and the power cord from time to time.

Refer servicing to qualified service personnel.

This fixture falls under protection class I. Therefore this fixture has to be connected to a mains socket outlet with a protective earthing connection.

Do not connect this fixture to a dimmer pack.

LED light emission. Risk of eye injury. Do not look into the beam at a distance of less than 2 meters from the front surface of the product. Do not view the light output with optical instruments or any device that may conncentrate the beam

If the fixture has been exposed to drastic temperature fluctuation (e.g. after transportation), do not switch it on immediately. The arising condensation water might damage your device. Leave the device switched off until it has reached room temperature.

Do not shake the fixture. Avoid brute force when installing or operating the fixture.

This fixture was designed for indoor use only, do not expose this unit to rain or use near water.

When choosing the installation spot, please make sure that the fixture is not exposed to extreme heat, moisture, dust or entertainment smoke (haze)

Air vents and slots in the fixture's head and base are provided for ventilation, to ensure reliable operation of the device and to protect it from overheating.

Do not block the light output with any object when the fixture is under operation.

The openings should never be covered with cloth or other materials, and never must be blocked.

This fixture should not be placed in a built-in installation unless proper ventilation is provided.

Only operate the fixture after having checked that the housing is firmly closed and all screws are tightly fastened.

Always use a secondary safety cable when mounting this fixture.

Do not block the front objective with any object when the fixture is under operation.

The fixture becomes very hot during operation. Allow the fixture to cool approximately 20 minutes prior to manipulate with it.

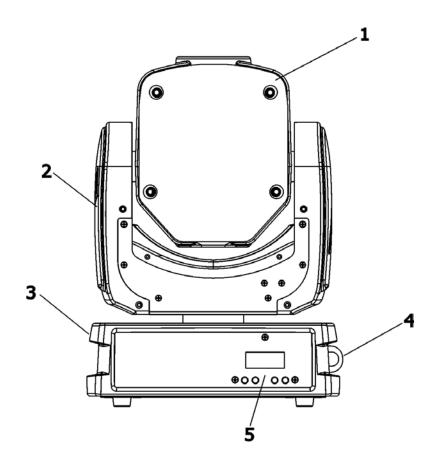

Operate the fixture only after having familiarized with its functions. Do not permit operation by persons not qualified for operating the fixture. Most damages are the result of unprofessional operation!

Please use the original packaging if the fixture is to be transported.

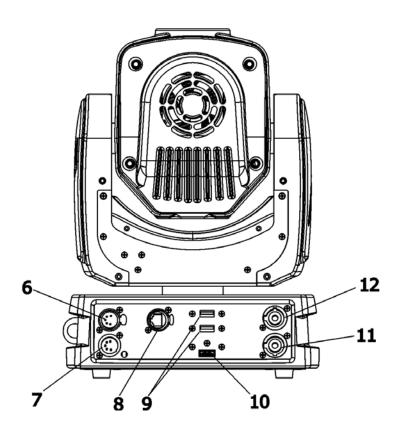

Please consider that unauthorized modifications on the fixture are forbidden due to safety reasons!

If this device will be operated in any way different to the one described in this manual, the product may suffer damages and the guarantee becomes void. Furthermore, any other operation may lead to dangers like short-circuit, burns, electric shock, crash etc.

2. Fixture exterior view

- 9 2x USB input
- 10 HDMI input
- 11 Power Input
- 12 Power output

3. Installation

Fixtures must be installed by a qualified electrician in accordance with all national and local electrical and construction codes and regulations.

3.1 Connection to the mains

For protection from electric shock, the fixture must be earthed!

The Robin MiniMe is equipped with auto-switching power supply that automatically adjusts to any 50-60Hz AC power source from 100-240 Volts.

Install a suitable plug on the power cord (if it is needed), note that the cores in the power cord are coloured according to the following table. The earth has to be connected!

If you have any doubts about proper installation, consult a qualified electrician.

Core (EU)	Core (US)	Connection	Plug Terminal Marking
Brown	Black	Live	L
Light blue	White	Neutral	N
Yellow/Green	Green	Earth	

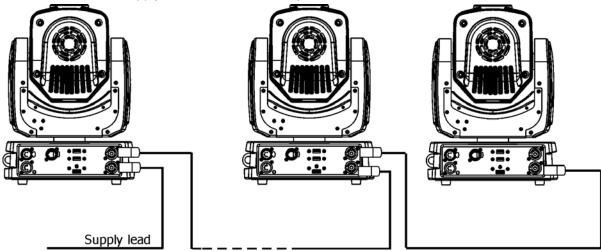

This device falls under class one and must be earthed (grounded)!

Design of the Robin MiniMe allows to connect several fixtures to AC mains power in one interconnected daisy chain using power input and throughput connectors. Needed daisy chain cords are stated in the chapter "Technical specifications"

The max. number of connected fixtures depends on the AC mains power voltage:

- 19 fixtures at power supply= 230V
- 16 fixtures at power supply= 208V
- 10 fixtures at power supply= 120V

Do not overload the supply line and the connecting leads.

Wiring and connection work must be carried out by qualified staff!

3.2 Rigging the fixture

A structure intended for installation of the fixture (s) must safely hold weight of the fixture(s) placed on it. The structure has to be certificated to the purpose.

The fixture (fixtures) must be installed in accordance with national and local electrical and construction codes and regulation.

For overhead installation, the fixture must be always secured with a safety wire

When rigging, derigging or servicing the fixture staying in the area below the installation place, on bridges, under high working places and other endangered areas is forbidden.

The operator has to make sure that safety-relating and machine-technical installations are approved by an expert before taking into operation for the first time and after changes before taking into operation another time.

The operator has to make sure that safety-relating and machine-technical installations are approved by a skilled person once a year.

Allow the fixture to cool for ten minutes before handling.

The projector should be installed outside areas where persons may walk by or be seated.

IMPORTANT! OVERHEAD RIGGING REQUIRES EXTENSIVE EXPERIENCE, including calculating working load limits, installation material being used, and periodic safety inspection of all installation materials and the projector. If you lack these qualifications, do not attempt the installation yourself, but use a help of professional companies.

CAUTION: Fixtures may cause severe injuries when crashing down! If you have doubts concerning the safety of a possible installation, do not install the fixture!

The fixture has to be installed out of the reach of public.

The fixture must never be fixed swinging freely in the room.

When installing the device, make sure there is no highly inflammable material (decoration articles, etc.) in a distance of min. 0.5 m.

CAUTION!

Use an appropriate clamp to rig the fixture on the truss.

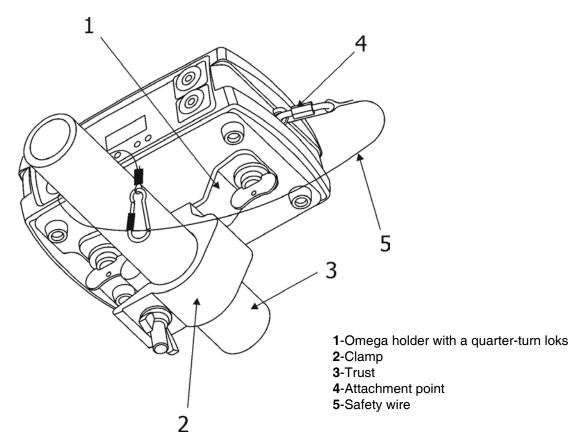

Follow the instructions mentioned at the bottom of the base.

Make sure that the device is fixed properly! Ensure that the structure (truss) to which you are attaching the fixtures is secure.

The fixture can be placed directly on the stage floor or rigged on a truss without altering its operation characteristics.

For securing a fixture to the truss install a safety wire that can hold at least 10 times the weight of the fixture. Use only safety wire with screw-on carabine. **Fasten the safety cable in the attachment point and around the truss as shown on the picture.**

Rigging via omega holder:

When installing fixtures side-by-side, avoid illuminating one fixture with another!

3.3 Positioning the Robin MiniMe

The Robin MiniMe is designed to be installed in one of four possible installation locations:

- 1. Front Table the fixture is placed near the floor in front of the screen.
- 2. Front Ceiling the fixture is suspended upside-down from the ceiling (truss) in front of the screen.

 Set Ceiling Projection in the menu Personality ("Pers--->"LED Engi" --->"Ceil P"--->"On")
- 3. Rear Table the fixture is placed near the floor behind the screen. Set Rear Projection in the menu Personality ("Pers--->"LED Engi" --->"Rear P"--->"On")

 Note that a special rear projection screen is required.
- 4. Rear Ceiling the fixture is suspended upside-down from the ceiling (truss) behind the screen.

 Set Rear Projection in the menu Personality ("Pers--->"LED Engi" --->"Ceil P"--->"On") and

 Ceiling Projection ("Pers--->"LED Engi" --->"Rear P"--->"On")

 Note that a special rear projection screen is required.

When determining the position of the fixture and projection screen, you will need to account for the projected image size, which is directly proportional to the projection distance.

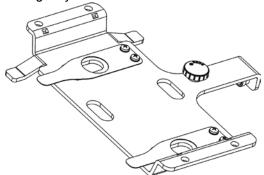

There is a chart of throw distance ratio of 3.5 : 1 to assist you in determining the ideal location for your fixture.

Note: There is a tolerance among these numbers due to optical component variations. We recommend that if you intend to permanently install the Robin MiniMe, you should physically test the projection size and distance using the actual fixture before you permanently install it.

3.4 Using the mounting bracket

The mounting bracket allows simple mounting of the Robin MiniMe on the ceiling. The mounting bracket is intended for horizontal mounting only.

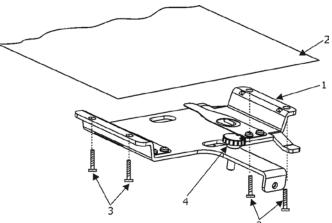

IMPORTANT! Ceiling mounting requires extensive experience, including calculating working load limits and installation material being used.

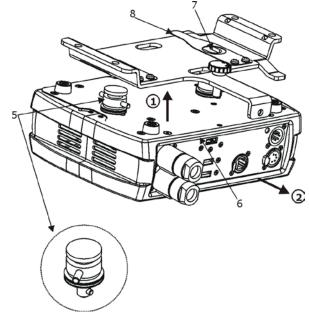

To fasten the Robin MiniMe on the ceiling via the mounting bracket, follow these steps:

1. Fasten the mounting bracket (1) on the ceiling (2) by means of the four screws (3). Check, that the stabilization screw (4) is screwed into mounting bracket.

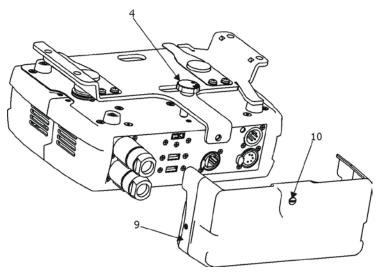

Note The screws are not supplied with the mounting bracket, their length, diameter and a type of screws depends on conditions of given installation.

- 2. Insert a pivot (5) into the mounting point in the fixture base (6) and turn it a full 1/4-turn clockwise to lock. Instal the second pivot.
- **3**. Insert the fixture with both pivots (5) into circular slots under securing blades (8) and than move the fixture towards the stabilization screw (4) until the pivots (5) reach the rectangular slots (7) and both securing blades (8) snap into groove in the pivots.
- 4. Check the fastening of the fixture.

- **5.** Gently tighten the stabilization screw until reaches the base of the fixture to prevent the MiniMe from wobbling.
- **6.** After connecting power and DMX cables place the cable cover (9) and secure it with an 1/4-turn screw (10)

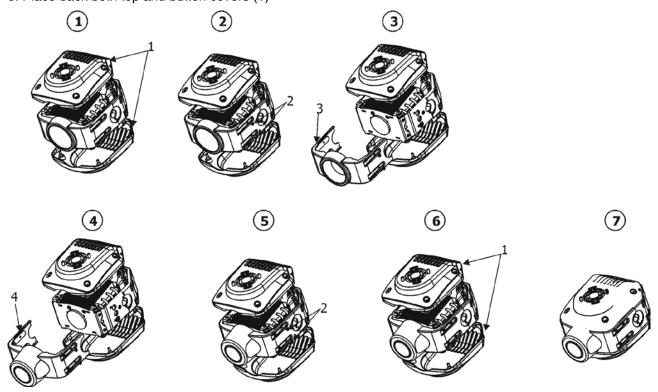

3.5 Installing the wide-angle lens module

Disconnect from the mains before the wide-angle module installing

If you need to install the optional wide-angle lens module, follow the steps:

- 1. Remove both top and button covers (1) from the fixture head.
- 2. Unscrew two screws (2) on the each side of the head.
- 3. Remove the standard lens module (3).
- 4. Place the wide-angle lens module (4).
- 5. Secure the wide-angle lens module on the fixture head by means of two screws (2) on each side of the head.
- 6. Place back both top and button covers (1)

3.6 DMX-512 connection

The fixture is equipped with 5-pin XLR sockets for DMX input and output. Only use a shielded twisted-pair cable designed for RS-485 and 5-pin XLR-plugs and connectors in order to connect the controller with the fixture or one fixture with another.

DMX - output

XLR mounting-sockets (rear view):

- 1 Shield
- 2 Signal (-)
- **3** Signal (+)
- 4 Not connected
- 5 Not connected

DMX-input

XLR mounting-plugs (rear view):

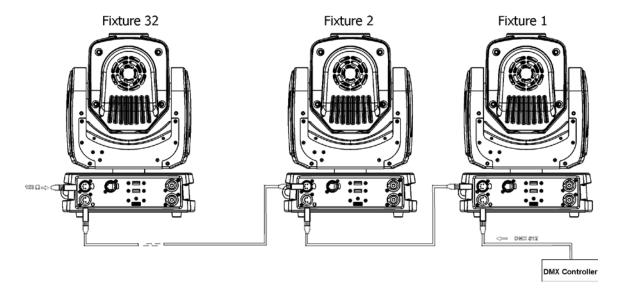

- 1 Shield
- 2 Signal (-)
- 3 Signal (+)
- 4 Not connected
- 5 Not connected

If you are using the standard DMX controllers, you can connect the DMX output of the controller directly with the DMX input of the first fixture in the DMX-chain. If you wish to connect DMX-controllers with other XLR-outputs, you need to use adapter-cables.

Building a serial DMX-chain:

Connect the DMX-output of the first fixture in the DMX-chain with the DMX-input of the next fixture. Always connect one output with the input of the next fixture until all fixtures are connected. Up to 32 fixtures can be interconnected.

Caution: At the last fixture, the DMX-cable has to be terminated with a terminator. Solder a 120 Ω resistor between Signal (–) and Signal (+) into a 5-pin XLR-plug and plug it in the DMX-output of the last fixture.

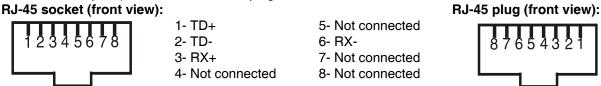

3.7 Ethernet connection

The fixtures on a data link are connected to the Ethernet with ArtNet communication protocol. The control software running on your PC (or light console) has to support Art-Net protocol.

Art-Net communication protocol is a 10 Base T Ethernet protocol based on the TCP/IP.Its purpose is to allow transfer of large amounts of DMX 512 data over a wide area using standard network technology.

IP address is the Internet protocol address. The IP uniquely identifies any node (fixture) on a network. **The Universe** is a single DMX 512 frame of 512 channels.

The Robin MiniMe is equipped with 8-pin RJ- 45 socket for Ethernet input. Use a network cable category 5 (with four "twisted" wire pairs) and standard RJ-45 plugs in order to connect the fixture to the network.

Patch cables that connect fixtures to the hubs or LAN sockets are wired 1:1,that is,pins with the same numbers are connected together:

1-1 2-2 3-3 4-4 5-5 6-6 7-7 8-8

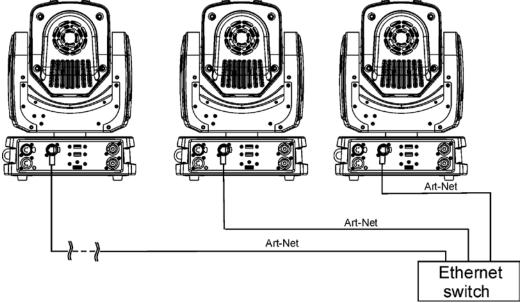

If only the fixture and the computer are to be interconnected, no hubs or other active components are needed. A cross-cable has to be used:

1-3 2-6 3-1 4-8 5-7 6-2 7-5 8-4

Connect the Ethernet inputs of all fixtures with the Ethernet network.

The option "ArtNet" has to be selected from the menu "Mode" at the fixture (DMXA 001-->Mode-->ArtNet). Set IP address, NetMask and the Universe.

(DMX address=144) (DMX address=25) (DMX address=1) IP addres=002.168.002.003 Universe=1 Universe=1 (DMX address=1) IP addres=002.168.002.002 Universe=1

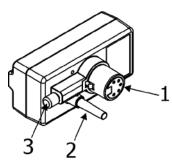

An advised PC setting: IP address: 002.xxx.xxx.xxx or 010.xxx.xxx.xxx (Different from fixture IP addresses) NET mask: 255.0.0.0

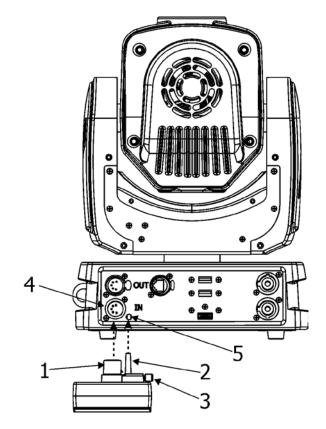

3.8. Wireless DMX operation

The external Robe Wireless CRMX-LB100 module allows receiving wireless DMX. CRMX module operates on the 2.4 GHz band.

- 1 5-pin XLR (female)
- 2 Locating pin
- 3 Lock

Push in the 5-pin XLR plug (1) into 5-pin XLR sockit (4) and simultaneously locating pin (2) into hole (5) in the fixture. In this way the wireless DMX module is connected with the fixture and prepared for operation. NOTE: when you disconnect the DMX wireless module from fixture, press and hold lock (5) during getting the wireless module out.

To link the fixture with DMX transmitter.

The fixture can be only linked with the transmitter by running the link procedure at DMX transmitter. After linking, the level of DMX signal (0-100 %) is displayed in the menu item "Stat" (Special -->Vireless -->Stat).

To unlink the fixture from DMX transmitter.

The fixture can be unlinked from receiver via the menu item "Unlink" (Special-->Vireless -->Unlink.).

5. Control menu

The Robin MiniMe is equipped with 2-row LCD display which allows to set the fixture's behaviour according to your needs, obtain information on its operation, test its various parts and lastly program it, if it has to be used in a stand-alone mode.

Control panel:

[ESCAPE] button used to leave the menu without saving changes.

[NEXT], [PREV] buttons for moving between menu items and for value adjusting.

[ENTER] button used to enter the selected menu (menu item) and to confirm adjusted value.

After switching the fixture on, display shows current DMX address.

5.1 Addressing (DMXA)

<u>Mode - Set operating mode.</u> Use this menu item to set DMX operating mode ("DMX") or ArtNet operation mode ("ArtNet"). If the ArtNet mode is selected, DMX address (D 001) and Universe (U 000) are shown by rotation.

IP Addr - Set IP Address. Use this menu to set desired IP address of the fixture.

IP NetM - Set NetMask. Use this menu to set desired NetMask of the fixture.

<u>Reset Addreses - Reset addresses.</u> This menu item sets IP address, netmask and Artnet universe to default values.

<u>DMX Addr - Set DMX address.</u> Use this menu item to set desired DMX start address of the fixture, which is defined as the first channel from which the Robin MiniMe will respond to the controller.

If you set, for example, the address 23, the Robin MiniMe will use channels 23 - 54 for control. Please, be sure that you do not have any overlapping channels in order to control each Robin MiniMe correctly and independently from any other fixture on the DMX data link.

ArtN Uni - Set ArtNet Universe. Use this menu item to set desired ArtNet Universe.

5.2 Fixture information (Info)

POn Time - **Power on time**. Select this menu to read the number of fixture operation hours.

<u>Total</u> - The item shows the total number of the operation hours since the Robin MiniMe has been fabricated.

Reset - The item shows the number of the operation hours that the Robin MiniMe has been powered on since the counter was last reset.

In order to reset this counter to 0, press the [Enter] button twice.

<u>LOn Time</u> - Light source on time. Select this menu to read the number of the light LED source operation hours.

<u>Total</u> - The item shows the total number of the LED source operation hours since the Robin MiniMe has been fabricated.

Reset - The item shows the number of the LED source operation hours that the Robin MiniMe has been powered on since the counter was last reset.

In order to reset this counter to 0, press the [Enter] button twice.

Air Fil - Air filter. Regular cleaning of the air filter is very important for the fixture's life and performance.

Dust, dirt and fog fluid residues reduces the fixture's light output and cooling ability.

The two items of this menu help you to keep cleaning period of the air filter.

<u>Aler P</u> - Alert period. Cleaning schedule for the fixture depends on the operating environment.

It is therefore impossible to specify accurate cleaning interval. This item allows you to change the cleaning interval of the air filters. This "alert" value is 300 hours and it is set as default. Inspect the fixture within its 300 hours of operation to see whether cleaning is necessary. If cleaning is required, clean all air filters and change the value in this menu on acceptable level. Min. level of alert period is 10 hours, max. is 300 hours.

R Ti - **Remaining Time**. The item allows you to read the time which remains to cleaning air filters. The time period is set in the menu mentioned above.

Expired time period is signalled by a negative mark (-) at the time value and a warning message on the display.

Clean the air filter and reset the counter by pressing the [Enter] button twice.

DMX In - **DMX readout.** The menu is used to read DMX values of each channel received by the fixture.

Temp - **Temperature**. The menu shows temperatures in the fixture.

Current - A current temperature in the fixture head and CPU.

<u>Highest</u> - A maximum temperature in the fixture head and CPU since the fixture has been fabricated.

<u>High Res</u> - A maximum temperature in the fixture head and CPU since the counter was last reset.

In order to reset this counter, press and hold both [NEXT] and [PREV] buttons and the [Enter] button at the same time.

Sw Ver - Software versions. Select this item to read the software version of the fixture modules.

GE - A graphic engine

IC-1 - A pan/tilt and zoom module

5.3 Personality (Pers)

Pan Rev - Pan reverse. The item allows to invert pan movement.

Tilt Rev - Tilt reverse. The item allows to invert tilt movement.

<u>P/T Mode</u> - Pan and Tilt movement mode. Use this menu to set mode of the pan/tilt movement.

Speed - Both Pan and tilt will move with the same speed as adjusted at the channel 5 "Pan/Tilt speed, Pan/Tilt time".

<u>Time</u> – The pan and tilt will move with different speeds and they will come at the same time to the end point of their tracks (pan and tilt use their optimal speeds). Time of the pan/tilt movement (25.5 sec. max.) is set by the channel "Pan/Tilt speed, Pan/Tilt time".

<u>P/T Feed</u> - Pan & Tilt Feedback. The menu item allows to return the mowing head to the required pan/tilt position after changing the position by an external force if this option is set on.

Note. The Pan/Tilt Feedback should be permanent On, the option Off is not suitable for standard operation and the head of the fixture can be damaged!

<u>BLC DMC</u> - Blackout during movement correction. Set this option on if you wish to close light output during the time when the head goes to its correct position, which has been changed by an external force.

Act Blc - Active blackout. Use this menu if you wish to close the light output during effect changes.

<u>P/T Mov</u> - The menu item allows to close light output while the pan/tilt coordinates are changing.

<u>C Cal M</u> - Colour calibration mode. The function switches on/off the colour calibration mode. If the function is active, a white colour (0-15 DMX) at the channel "Virtual colour Wheel" is set to 8000K.

<u>Display</u> - Display adjusting. This menu allows you to adjust the display behaviour.

 $\underline{\text{Turn}}$ - This function turns the display by 180°. The display can be also turned by pressing and holding the [ESCAPE] button.

On/Off T - This function allows you to keep the display permanent on or turn it off

two minutes after last pressing any button on the control panel.

Contrast- Use this function to adjust contrast of the display (0-15).

Backlight- Use this function to adjust backlight of the display (0-15).

LED Engi - **Led engine options**. Enter the menu if you want to set special options for LED engine.

<u>Ceil P</u> - Ceiling projection. When this function is "On", the picture is top (bottom and left) right reversed.

This function enables to project the image from a ceiling mounting of the MiniMe.

<u>Rear P</u> - Rear projection. When this function is "On", the picture is left (right) reversed.

This function enables to project the image to a rear projection screen.

GRP Engi - Graphic engine options. Enter the menu if you want to set special options for graphic engine.

<u>Aspect R</u> - Keeping Aspect ratio. If this function is "On", the fixture keeps native aspect ratio of played pictures (videos).

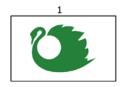

If this function is "Off", all pictures (videos) are played in the aspect ration 16:10 regardless of native aspect ratio of each picture (video).

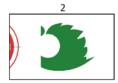

<u>Gobo Sel Mode</u> - Gobo selection mode. The media files assigned to the DMX values can be sorted either in alphabetical (item ABCD) or numerical order (item Numer).

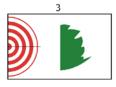

Default assigning is the alphabetical order.

<u>SS Gobo Swap T</u> - **Slide Show gobo swap time**. The option sets time period during which a gobo stay in a position before changing at the "Gobos presentation" function (channel 17/ Digital gobo wheel/ DMX range of 251-252).

Effect wheel DMX 3 - transition from left-->right, horizontally

Ref Rate - Refresh rate. Select desired refresh rate 50Hz or 60Hz.

<u>Optics M</u> - Optics mode. The option "Wide Optics" corrects distortion of the image if the Lens wide-angle 1:1.5 is used.

<u>Fans</u> - **Fan mode**. Use the menu to set the fixture fans to max. fan power mode ("High") or to the auto-control mode ("Auto").

Defaults - The menu item allows to set all fixture parameters to the default (factory) values.

5.4 Manual Control (Manual)

DMX Ctrl - DMX channels control. Use the menu to manually control each channel effect.

LED Engi - LED Engine options

Ext Inp - Via this menu option is possible to activate the external input (HDMI).

<u>Keystone</u> - The item allows to use LED engine keystoning when the external input is active.

Led On/Off - The item allows to switch off LED engine when the external input is active.

5.5 Stand-alone (St Alone)

<u>Auto Run</u> - **Presetting playback**. This function allows you to select the program which will be played in the stand-alone mode after switching the fixture on. Selected program will be played continuously in a loop.

<u>PL DMX Prg</u> - Play DMX program. Select this menu to run one of 9 programs which have been recorded via the menu "Rc DMX Prg". When the program is running, pressing the [ENTER] pauses its running.

Rc DMX Prg - **Record DMX program**. The menu allows you to record DMX data that receives the fixture and then replay them again via the menu "PL. DMX Prg". There is a menu of 9 programs which can be used for recording DMX data.

Select desired program and press the [ENTER] to start recording. To stop recording, press the [ENTER] again.

Recorded programs ca be copied to the USB memory stick (menu "User Media") and after that loaded into another fixture (s).

5.6 Reset (Reset)

This option enables to index all effects and return them to their standard positions.

Reset GE - reset of the graphic engine module.

Reset P/T - reset of the pan/tilt module.

Reset Focu - reset of the focus module.

Reset All - reset of all fixture modules.

5.7 User Media (User Media)

Custom media files can be saved in the fixture memory or can be called from the external USB drive.

No USB - This item will appear if no USB flash drive is connected.

<u>Init USB</u> - This item will appear if an USB flash drive without desired folder structure is connected. Press [ENTER] to start initialization. Initilization process creates folder called 'minime' in the root folder of the USB flash drive. Inside this folder are three subfolders: extmedia, intmedia, update.

Top level folder

minime
— extmedia
— intmedia
— programs
— update

Recommended and supported filesystem on the USB flash drive is FAT16

exmedia - the folder serves for media files which will be played directly from this folder.

intmedia - the folder serves for media files which will be loaded into fixture memory.

programs - the folder serves for recorded programs (St Alone--> Rc DMX).

update - the folder for update file.

These folders structure may be also created by means of your computer, but exactly the same names, order and small letters have to be kept.

The folder exmedia (intmedia) serves for a collection of custom media files. In the folder, the Robin MiniMe sorts files in alphabetical or numerical order and assigns them to DMX values. Max. number of media files in the folder is 250.

We recommend to follow the 3-digit conventions for media files, where a 3-digit number is followed by an underscore and a name e.g.: 001_mountains.jpg, 002_landscape.jpg......

The numerical order is suitable in the case that you need to assign certain media files to specified DMX values.

Example: The table below show differences in file DMX assignment between the alphabetical and numerical sorting.

The table also includes file names without a 3-digit convention to illustrate their behaviour in the numerical sorting.

Media file name	DMX value at Alphabetical Sorting	DMX value at Numerical Sorting
001_testfile1.jpg	1	1
020_testfile2.jpg	2	20
19_testfile3.jpg	3	19
3_testfile4.jpg	4	3
460_testfile5.jpg	5	Not Assigned*
testfile.jpg	6	Not Assigned**

^{*} The 3-digit number has to be in the range of 001-250.

To use custom media files, you have tu set relevant DMX values on the channel 16 (Digital gobo wheel selection).

DMX	Function
0-31	Default-Factory Digital gobo wheel
32-63	Internal Custom Digital gobo wheel
64-95	External Custom Digital gobo wheel (USB memory stick)

^{**} The media file name does not contain any digit.

Supported file formats are:

jpg for pictures (resolution up to 4096 x 4096 pixels)

mpeg4 and h264 for videos (resolution up to 1920 x1080 pixels, optimal 1280x800)

Note: the native resolution of the light projection engine is 1280x800 pixels, therefore optimal resolution for pictures and videos is 1280x800 pixels.

Note: AVI, MOV etc. is a container with video and audio in it. For example, you can have AVI file with audio encoded as mp3, video as mpeg2. This file cannot be played. Another AVI file can have audio as ogg vorbis and video as h264. This file can be played. Whether the Robin MiniMe can play the file or not depends on the encoding, not on the container.

<u>Mirror Media</u> - This menu allows to load files from the folder intmedia (on the USB memory stick) into the fixture and vice versa.

<u>From Minimi</u> - the option copies custom media files from the fixture into USB memory stick (custom files only).

 $\underline{\textbf{To Minimi}}$ - the option copies custom media files from USB memory stick into the fixture.

There is 9.5 GB free space available for custom content in the fixture.

Note: Custom media files in the fixture memory will be overwritten. Factory files stay without change.

<u>Mirror Program</u> - This menu allows to load programs from the folder programs (on the USB memory stick) into the fixture and vice versa.

<u>From Minimi</u> - the option copies created programs (menu "St Alone") from the fixture into USB memory stick.

To Minimi - the option copies programs from the USB memory stick into the fixture.

Note: Created programs in the fixture will be overwritten.

<u>Convert Inter</u> - The option converts custom pictures (only) in the fixture into optimal resolution (1280x800 pixels) for the Robe MiniMe. These converted pictures can be copied back to the USB memory stick (option "Mirror Media").

Delete Int. Me. - This menu delete media files in the fixture's memory.

To copy custom files into fixture

- 1. Connect the MiniMe to the mains.
- 2. Plug the USB flash drive into the fixture.
- 3. Initialize the USB flash drive (via menu "Init USB") and unplug it.
- 4. Plug the USB flash drive into computer.
- 5. Upload content into folder (intmedia) and unplug it.
- 6. Plug the USB flash drive back into the MiniMe.
- 7. Mirror content into the MiniMe (only intmedia) via menu "Mirror Media".
- 8. Unplug the USB flash drive from the MiniMe.

5.8 Special functions (Special)

RDM Low - This menu item shows the first part of the RDM identification code.

RDM High - This menu item shows the second part of the RDM identification code.

<u>Wireless</u> - Wireless DMX information. The menu allows to read some information about Wireless DMX operation

Stat - Wireless status. Use the menu to read wireless DMX status.

Unlink - use this item to unlink fixture from wireless DMX.

<u>HDMI Delay</u> - HDMI delay. If this function is set off, there is not a 3 second delay when switching between Internal and External HDMI input from DMX channel 6 "Special functions" (DMX range of 210-229 DMX).

<u>Calib</u> - Calibration menu. The menu allows fine adjustment of the pan, tilt, focus, white colour and Gamma curve.

Cal PTF - Calibration of pan, tilt and focus.

Pan C - fine calibration of pan

Tilt C - fine calibration of tilt

Focu C - fine calibration of focus

Focu V - version of mechanical focus (should be set once more if the light source has been changed).

Focu H - setting of focus hysteresis (should be set once more if the light source has been changed).

Store - saves adjusted values into memory

Cal Col - Calibration of white colour and gamma curve.

Red C - a red saturation setting

Green C - a green saturation setting

Blue C - a blue saturation setting

Gamma C - a gamma setting

Store - saves adjusted values into memory

Calibration of pan/tilt/focus via the control board.

- 1. Disconnect DMX controller from the fixture and enter the "Calib" menu.
- 2. Enter the "Cal PTF" menu.
- 3. Use the [PREV] and [NEXT] to find "Pan" and press [ENTER].
- 4. Set desired value and save it by pressing [ENTER].
- 5. Repeat steps 3 and 4 for tilt and focus.
- 6. After calibrating all effects, find item "Store" and press [ENTER]. to save all adjusted values and reset the fixture.

Calibration of white colour.

- 1. Disconnect DMX controller from the fixture and enter the "Calib" menu.
- 2. Enter the "Manual" menu, open shutter and dimmer and set "Cyan", "Magen", "Yellow", "Virt C" items to 0.
- 3. Enter the "Cal Col" menu. By means of the Red, Green and Blue items adjust the 8000K colour temperature as exactly as possible $(\Delta u'v'=0)$.
- 4. After calibrating, find item "Store" and press [ENTER]. to save all adjusted colours and reset the fixture

<u>Hori Align</u> - Digital calibration of the RGB LED device. This function allows digitally "align" RGB LED device in the fixture head in case, that it is placed askew.

<u>Sw Upd</u> - **Graphical software update.** The item starts update of the graphical software in the fixture. Insert the USB flash drive with update file into USB port, select this option and press [ENTER]. Version of the new software will be displayed, eg, v 003?.

If you want to run update, press [ENTER] again.

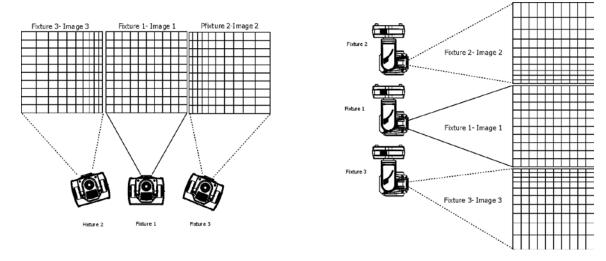

<u>FW Upd</u> - Firmware update. The item starts update of hardware functions like pan, tilt,focus...etc. and should be performed after graphical software update

To perform software update of the fixture

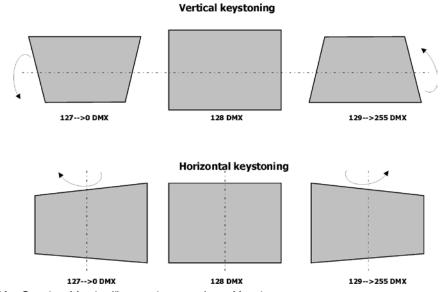

- 1. Connect the MiniMe to the mains.
- 2. Plug the USB flash drive into the fixture.
- 3. Initialize the USB flash drive (via menu "Init USB") and unplug it.
- 4. Plug the USB flash drive into computer.
- Download update file from Anolis website into your computer.
 Note: Please make sure the full name of the update file is minime_vxxx.tar.gz (vxxx=version number) before you upload it into the USB flash drive.
- 6. Upload update file into folder (update) and unplug it.
- 7. Plug the USB flash drive back into the MiniMe.
- 8. Run graphical software update via menu "Sw Upd".
- 9. Run firmware update update via the menu " FW Upd" (if the notice " Do Fw Upd " appeared)

6. Keystones

If an image is output from the Robin MiniMe at an angle, the image may be skewed.

Two keystone channels (KeyStoning Vertical, KeyStoning Horizontal) adjust the image shape, aspect ratio is kept. Default DMX value for both channels is 128, it means that no keystone correction has been used.

The channel "KeyStoning Vertical" turns image along X-axis.

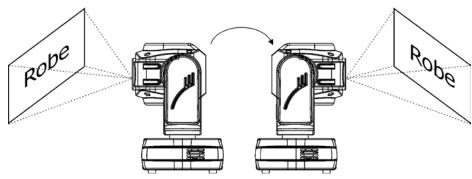

The channel "KeyStoning Horizontal" turns image along Y-axis.

The keystone values can also be used to create interesting skewing effects.

Note: The horizontal keystone is not running while the Robin MiniMe displayes external HDMI source.

The option "Save AutoKeystoning" from DMX chart (channel Special functions, range 230-234) allows to save adjusted values of the keystone channels and correct them automatically when head position is changed: First use the Keystoning Vertical channel and the Kyestoning Horizontal channel to adjust image shape, after that go and stay at this DMX range for 3 seconds to write keystoning values into memory. To activate Auto-Keystoning, set channels Horizontal and Vertical Keystoning to 0. Now, if you move with the fixture head on another place in the same plane, the image shape will be automatically corrected.

If you move the head in a tilt into oposite position, the image shape will be automatically corrected again and the image will not be turned:

7. Using external HDMI input

If you want to use the external HDMI input of the fixture, you have to activate the external HDMI input via setting DMX value into range of 220-229 on the channel 6 (Special functions). If you want to return back to the internal HDMI, set DMX value into range of 210-219 on this channel. Stay in desired DMX range for at least 3 seconds.

The horizontal keystone is not running while the Robin MiniMe displayes external HDMI source.

8. Error and information messages

DMX address blinks

DMXA

001

It means that no DMX signal is received. Check DMX connectors and cables, check connection between the fixture and the control desk.

Exclamation mark at sign "Art"

Art!

U 000

It means that no ArtNet signal is received. Check RJ 45 connectors and cables, check connection between the fixture and the control desk.

Tilt Err

This message will appear after the reset of the fixture if the head's magnetic-indexing circuit malfunctions (sensor failed or magnet is missing) or the stepping motor is defective or its driving IC on the PCB. The head is not located in the default position after the reset.

Pan Err

This message will appear after the reset of the fixture if the head's magnetic-indexing circuit malfunctions (sensor failed or magnet is missing) or the stepping motor is defective or its driving IC on the PCB. The head is not located in the default position after the reset.

Focus Err

This message will appear after the reset of the fixture if the focus module malfunctions (sensor failed or magnet is missing) or the stepping motor is defective or its driving IC on the PCB.

Temp Err

This message informs you that head temperature exceeded 70°C and light source has been switched off.

InnCom Err

This message informs you that communication between Raspberry and a pan/tilt PCB is faulty.

Ethernet Err

This message informs you that some ethernet error has occured e.g. faulty network card.

Need Hw Upd

This message informs you that hardware update has to be performed.

No proj. Reply

This message informs you that the projector in the fixture head does not communicate with the fixture base.

Clear air Filt.

This message informs you that the menu item remaining time ("R Ti ") in the menu "Information" is at 0 value. Clean air filter and reset this counter.

Head Fan Err.

This message informs you that the small rear fan in the fixture head is faulty and the light source has been switched off.

10. Maintenance and cleaning

DANGER! Disconnect from the mains before starting any maintenance work

A soft lint-free cloth moistened with any good glass cleaning fluid is recommended for objective lens, under no circumstances should alcohol or solvents be used!

Never use alcohol or solvents for cleaning lenses in the moving head!

Use wet cloth only.

It is absolutely essential that the fixture is kept clean and that dust, dirt and smoke-fluid residues must not build up on or within the fixture. Otherwise, the fixture's light-output will be significantly reduced. Regular cleaning will not only ensure the maximum light-output, but will also allow the fixture to function reliably throughout its life.

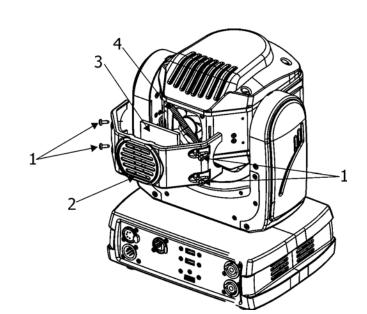

The front lens may require monthly cleaning as smoke-fluid tends to building up residues, reducing the light-output very quickly. The cooling fans should be cleaned according to the situation (at least annually). The interior of the base should be cleaned at least annually using a vacuum-cleaner or an air-jet.

More complicated maintenance and service operations are only to be carried out by authorized distributors.

Important! Check the air filter periodically and clean before it become clogged!

Clean the air filter placed in the rear side of the fixture head . Use a vacuum cleaner, compressed air or you can wash them and put back dry.

After replacing the air filters, reset the elapsed time counter in the menu "Information" (Info--->Air Fil--->Ela T).

- 1- fastening screws
- 2- rear cover of the head
- 3- Air filter
- 4- Velcro fastener

10.1 Replacing a fuse

This replacement has to be realized by a qualified person or ROBE service worker only.

Specifications are subject to change without notice. August 29, 2014

11. ChangeLog

This section summarizes all types of changes in the user manual.

Version of the manual	Date of issue	Description of changes
1.3	8/12/2013	DMX chart version 0.93 was renamed at version 1.0
1.4	7/01/2014	Added chapter " 7. Using external HDMI input." Changes in technical specifications DMX chart version 1.1 (change at channel 17)
1.5	15/01/2014	DMX chart version 1.2. Changes in menu Personality and User Media
1.6	10/03/2014	Added chapters 3.4 Using the mounting bracket 3.5 Installing the wide-angle lens module
1.7	21/05/2014	Added menu items: 'Pers'->GRP Engi'->'Ref Rate'-> '50 Hz' / '60 Hz'. 'Pers'->GRP Engi'->'Optics M'->'Wide Optics' / 'None' 'Special'->'HDMI Delay'->'Delay Off' (no 3sec. delay) / 'Delay On' 'Special'->'Calib'->Hori Align'-> Range from -3.0° to 3.0°
1.8	04/09/2014	Added menu item: 'DMXA'->'Reset Addreses'. New error messages: No proj. reply Head Fan Err DMX chart version 1.3 (change at channel 17-Video Speed Control)
