

GENIO MOBILE

Easily positioned, powerful and with extraordinary manoeuvrability possibilities.

The Mobile version of Genio features all the advantages of a product with high luminous power and a small footprint, but combines them with considerably greater flexibility. The articulated joints of its "arm" structure ensure remarkable mobility of the fixture head, whose wide Pan and Tilt movement (540° and 270°) is motorized (controllable via DMX or remote control unit). This feature further increases the fixture's application possibilities: **GENIO MOBILE** is ideal wherever intense dynamic lighting effects are required, and perfect integration with the structures to be illuminated is also essential. Small, fast and flexible, it provides powerful diffused lighting, particularly useful for accenting architectural details, perspectives and profiles.

GENIO MOBILE is a concentrate of high-tech features, lightweight (just 6.5 kilos), practical and sturdy, as well as being protected to IP 65.

GENIO MOBILE is also available in a White LED version, with 12 white and 4 amber LEDs.

01: LED'S - THE LIGHT SOURCE THAT MAKES THE DIFFERENT

LEDs offers a series of unbeatable advantages over conventional light sources: they have a life of over 100,000 hours at full power, with practically non-existent maintenance.

They generate light that does not emit ultraviolet rays (which are potentially dangerous) nor infrared rays, thus avoiding heating or damaging the objects being illuminated.

All this with considerable energy saving and incomparable colour rendering: for example, the red's intensity is the same as that of a 750W halogen lamp,

but consumes less than 100W.

LEDs therefore offer a highly competitive ratio between low consumption and very high efficiency, which also means lower environmental impact.

02: RGB / COLOUR TEMPERATURE

Additive RGB colour mixing, obtained using a matrix of 4 red, 8 green and 4 blue LEDs, offers an endless range of colour combinations, from the deepest to the softest colours, with an effective control of their tone. Colour temperature is 6.000°K and can be varied in a linear manner, directly on the fixture, according to needs.

03: WHITE LED / COLOUR TEMPERATURE

Temperature colour between 2.000°K and 6.700°K, obtained with a LED matrix: 12 whites and 4 ambers, ensures unlimited possibilities of tones of white, from the warmest to the coolest. Linear temperature colour adjustment can be carried out directly on the fixture, according to requirements.

04: INTERCHANGEABLE LENSES

GENIO MOBILE's luminosity is very high 1.800 RGB and 1.800 WHITE LED lumens is currently unparalleled in the LED lighting sector. The interchangeable lenses (8° 25° 40°) offer various projection angles and allow **GENIO MOBILE** fixtures to be used at different distances from the objects to be illuminated.

05: SILENT RUNNING

The extraordinary efficiency of **SGM LED LINE** fixtures is absolute silent. In fact, without the use of any kind of forced ventilation, cooling is carried out via convection, by means of the units' rear finning. An electronic self-regulating temperature system ensures continuous operation even in extreme conditions.

06: TOTALLY INDEPENDENT OPERATION

SGM LED LINE fixtures are completely programmable and can be run without the need for any external controller. In 'stand-alone' mode, i.e. using just their on-board microcomputer, it's possible to form systems consisting in several fixtures, up to a maximum of 30 (with 1 'MASTER' and 29 'SLAVES'), which can be programmed independently. The fixtures can also be controlled via computer, or using a DMX control system (such as SGM's REGIA 2048 console). In this case, it's possible to connect dozens of fixtures and control them simultaneously via DMX.

07: CONTROL

GENIO MOBILE functions can be controlled via USITT Standard DMX 512 serial digital signal or RS 232 serial signal.

GENIO MOBILE transmits and receives on 13 DMX channels.

08: PLAYBACK PROGRAMMING FOR A WHOLE WEEK

The on-board menu offers an extremely interesting function for scenographic architectural lighting applications: the possibility of running the completely automatic playback of a series of 48 'events' previously programmed on the fixture and organized to be run one after another over a period of a week.

Each event can include different settings of luminous intensity and colour mixing, shutter effects (strobe, pulse, random strobe), macro (rainbow, random colour), etc.

The order, the precise instant in which they begin, and the duration of each event can be accurately programmed for 7 days directly on the fixture.

09: FUNCTION MENU

GENIO MOBILE has a multi-function menu which is used to:

- configure fixtures according to requirements
- input "standalone" programs
- perform self-tests
- report operational status information.

The menu is accessed by means of a user-friendly interface with a 10-digit display.

The on-board software can be upgraded via DMX.

10: INSTALLATION

GENIO MOBILE has unusual, particularly stylish lines that enable it to discreetly fit into the surroundings and harmonically adapt to the architectural elements and settings to be lit.

GENIO MOBILE is preset for various types of installation:

- Floor or wall-mounted by means of four holes on its base, using M6 screws.
- Flown from trussing - even upside down - (by fitting a clamp to the two Fast-Lock holes on its base).
- Floor-standing (on flat surfaces), maintaining utmost stability with any head angle.

GENIO MOBILE's head can be inclined vertically or horizontally, in order to best adapt to the areas and architectural elements to be illuminated.

Pan: 540°; Tilt: 270°.
