Technical Data

Scrolling Modes

- Continuous Mode** The position of the gel string is proportional to the intensity level of the DMX signal
- Step Mode** The position of the gel string is divided into steps, one step per colour.
- Auto Trace Mode** The unit continuously steps through each colour from the first to the last one and then back to the first one on the string.

CC/WARP Channel Mapping

Channel	Function
1	Colour
2	Fan speed
3	Reset

Notes:

When used with **WARD/M**, set the scroller's start address to 1.
DMX data on **WARD/M**'s XLR4 are mapped to address 1.
ISIS® definition Id. 284 is the DMX mapping for **CC/WARP** and **WARD/M**.

User Interface

1	Green LED	DMX signal
2	Red LED	DC power
3	TEST button	Test & configuration
4	Rotary switches	DMX address
5	DIP switches	Scroll & speed modes

This equipment complies with all applicable European directives and carries a CE mark.

Electrical Data

- **CC/WARP** is controlled by a DMX512/1990 signal.
- The XLR4 matches the output connector on **WARD/M**, which sends DMX and provides the DC supply voltage.
